

EMERGENCY RELEASE SYSTEM

FOR FIRE CURTAINS

EMERGENCY RELEASE SYSTEM FOR FIRE CURTAINS

Station with emergency manual release mechanism

The fire curtain release mechanism maintains continuous tension in the system, enabling it to be activated instantly in an emergency. This mechanism is positioned on the rigging.

The fire curtain connected to the substation will deploy automatically when the device is manually released. This device will be installed as part of a complete fire curtain system.

Three levels of protection can be provided by installing manual and motorized fire curtains, as well as fire alarm connections. No special training is required, as the system can be manually reset by the operator.

The Standard configuration comes with:

FEATURES

- Push the handle to the left to release
- Pull down on the black handle to reset
- Wall mounted
