# SAFETY BEAM CLAMP

## SAFETY BEAM CLAMP

Without the need for any equipment, these safety beam anchors are designed to be attached to an overhead structure. Simply size the attachment to the bottom flange of the beam, secure it in place, and you're done. Beam anchors provide a secure and useful way to attach to the upper beams.

This sliding version can follow the user to prevent a pendulum fall. The breaking strength of this model is 5000 lbs (22kN).

### TECHNICAL DATA

Product N°	Model N°	Product Name	Size of beam	Style
● V8222150	CP-11010-3	Aluminum Super Sliding Beam	3.5" to 12" (88.9mm to 304.8mm)	Sliding

We supply life safety equipment for working at heights, in addition to designing and installing the infrastructure required for attaching this equipment. Call us for additional information.
